ABBREVIATIONS USED IN THIS REPORT

CE: Capital Economics - is the economics consultancy that provides Link Group, Treasury solutions, with independent economic forecasts, briefings and research.

CFR: capital financing requirement - the council's annual underlying borrowing need to finance capital expenditure and a measure of the council's total outstanding indebtedness.

CIPFA: Chartered Institute of Public Finance and Accountancy – the professional accounting body that oversees and sets standards in local authority finance and treasury management.

CPI: consumer price index – the official measure of inflation adopted as a common standard by countries in the EU. It is a measure that examines the weighted average of prices of a basket of consumer goods and services, such as transportation, food and medical care. It is calculated by taking price changes for each item in the predetermined basket of goods and averaging them.

DLUHC: the Department for Levelling Up, Housing and Communities - the Government department that directs local authorities in England.

ECB: European Central Bank - the central bank for the Eurozone

EU: European Union

EZ: Eurozone -those countries in the EU which use the euro as their currency

Fed: the Federal Reserve System, often referred to simply as "the Fed," is the central bank of the United States. It was created by the Congress to provide the nation with a stable monetary and financial system.

FOMC: the Federal Open Market Committee – this is the branch of the Federal Reserve Board which determines monetary policy in the USA by setting interest rates and determining quantitative easing policy. It is composed of 12 members--the seven members of the Board of Governors and five of the 12 Reserve Bank presidents.

GDP: gross domestic product – a measure of the growth and total size of the economy.

G7: the group of seven countries that form an informal bloc of industrialised democracies--the United States, Canada, France, Germany, Italy, Japan, and the United Kingdom--that meets annually to discuss issues such as global economic governance, international security, and energy policy.

Gilts: gilts are bonds issued by the UK Government to borrow money on the financial markets. Interest paid by the Government on gilts is called a coupon and is at a rate that is fixed for the duration until maturity of the gilt, (unless a gilt is index linked to inflation); while the coupon rate is fixed, the yields will change inversely to the price of gilts i.e., a rise in the price of a gilt will mean that its yield will fall.

IMF: International Monetary Fund - the lender of last resort for national governments which get into financial difficulties.

MPC: the Monetary Policy Committee is a committee of the Bank of England, which meets for one and a half days, eight times a year, to determine monetary policy by setting the official interest rate

in the United Kingdom, (the Bank of England Base Rate, commonly called Bank Rate), and by making decisions on quantitative easing.

MRP: minimum revenue provision - a statutory annual minimum revenue charge to reduce the total outstanding CFR, (the total indebtedness of a local authority).

PWLB: Public Works Loan Board – this is the part of H.M. Treasury which provides loans to local authorities to finance capital expenditure.

QE/QT: quantitative easing – is an unconventional form of monetary policy where a central bank creates new money electronically to buy financial assets, such as government bonds, (but may also include corporate bonds). This process aims to stimulate economic growth through increased private sector spending in the economy and also aims to return inflation to target. These purchases increase the supply of liquidity to the economy; this policy is employed when lowering interest rates has failed to stimulate economic growth to an acceptable level and to lift inflation to target. Once QE has achieved its objectives of stimulating growth and inflation, QE will be reversed by selling the bonds the central bank had previously purchased, or by not replacing debt that it held which matures. This is called quantitative tightening. The aim of this reversal is to ensure that inflation does not exceed its target once the economy recovers from a sustained period of depressed growth and inflation. Economic growth, and increases in inflation, may threaten to gather too much momentum if action is not taken to ‘cool’ the economy.

RPI: the Retail Price Index is a measure of inflation that measures the change in the cost of a representative sample of retail goods and services. It was the UK standard for measurement of inflation until the UK changed to using the EU standard measure of inflation – Consumer Price Index. The main differences between RPI and CPI is in the way that housing costs are treated and that the former is an arithmetical mean whereas the latter is a geometric mean. RPI is often higher than CPI for these reasons.

SONIA: the Sterling Overnight Index Average. Generally, a replacement set of indices (for LIBID) for those benchmarking their investments. The benchmarking options include using a forward-looking (term) set of reference rates and/or a backward-looking set of reference rates that reflect the investment yield curve at the time an investment decision was taken.

TMSS: the annual treasury management strategy statement reports that all local authorities are required to submit for approval by the full council before the start of each financial year.

VRP: a voluntary revenue provision to repay debt, in the annual budget, which is additional to the annual MRP charge, (see above definition).

Annual Treasury Management Review 2022/23

Purpose

This Council is required by regulations issued under the Local Government Act 2003 to produce an annual treasury management review of activities and the actual prudential and treasury indicators for 2022/23. This report meets the requirements of both the CIPFA Code of Practice on Treasury Management, (the Code), and the CIPFA Prudential Code for Capital Finance in Local Authorities, (the Prudential Code).

During 2022/23 the minimum reporting requirements were that the Full Council should receive the following reports:

- an annual treasury strategy in advance of the year (Council 22nd February 2022)
- a mid-year, (minimum), treasury update report (Council 21st February 2023)
- an annual review following the end of the year describing the activity compared to the strategy, (this report)

The regulatory environment places responsibility on members for the review and scrutiny of treasury management policy and activities. This report is, therefore, important in that respect, as it provides details of the outturn position for treasury activities and highlights compliance with the Council's policies previously approved by Members.

This Council confirms that it has complied with the requirement under the Code to give prior scrutiny to all of the above treasury management reports by the Finance and Assets Committee before they were reported to the Full Council.

No Member training on treasury management was undertaken during the 2022/23, but a training course has been arranged for 5th October 2023 as part of the member training programme following the election in May.

Executive Summary

During 2022/23, the Council complied with its legislative and regulatory requirements. The key actual prudential and treasury indicators detailing the impact of capital expenditure activities during the year, with comparators, are as follows:

Prudential and treasury indicators	31.3.22 Actual £000	2022/23 Revised Budget £000	31.3.23 Actual £000
Capital expenditure	481	10,835	8,851
Capital Financing Requirement:	9,490	13,088	10,127
External debt	0	0	0
Investments	38,430		36,176
Net borrowing	38,430		36,176

Other prudential and treasury indicators are to be found in the main body of this report. The Director, Finance also confirms that borrowing was only undertaken for a capital purpose and the statutory borrowing limit, (the authorised limit), was not breached.

Introduction and Background

This report summarises the following:-

- Capital activity during the year;
- Impact of this activity on the Council's underlying indebtedness, (the Capital Financing Requirement);
- The actual prudential and treasury indicators;
- Overall treasury position identifying how the Council has borrowed in relation to this indebtedness, and the impact on investment balances;
- Summary of interest rate movements in the year;
- Detailed debt activity; and
- Detailed investment activity.

1. The Council's Capital Expenditure and Financing

The Council undertakes capital expenditure on long-term assets. These activities may either be:

- Financed immediately through the application of capital or revenue resources (capital receipts, capital grants, revenue contributions etc.), which has no resultant impact on the Council's borrowing need; or
- If insufficient financing is available, or a decision is taken not to apply resources, the capital expenditure will give rise to a borrowing need.

The actual capital expenditure forms one of the required prudential indicators. The table below shows the actual capital expenditure and how this was financed.

£000 General Fund	31.3.22 Actual	2022/23 Revised Budget	31.3.23 Actual
Capital expenditure	481	10,835	8,851
Financed in year	1,661	1,999	2,980
Unfinanced capital expenditure	(1,180)	8,836	5,871

The negative unfinanced capital expenditure in 2021/22 represents CIL funding used to repay debt incurred in previous years on the Leisure Centre.

2. The Council's Overall Borrowing Need

The Council's underlying need to borrow for capital expenditure is termed the Capital Financing Requirement (CFR). This figure is a gauge of the Council's indebtedness. The CFR results from the capital activity of the Council and resources used to pay for the capital spend. It represents the 2022/23 unfinanced capital expenditure (see above table), and prior years' net or unfinanced capital expenditure which has not yet been paid for by revenue or other resources.

Part of the Council's treasury activities is to address the funding requirements for this borrowing need. Depending on the capital expenditure programme, the treasury service organises the Council's cash position to ensure that sufficient cash is available to meet the capital plans and cashflow requirements. This may be sourced through borrowing from external bodies, (such as the Government, through the Public Works Loan Board [PWLb], or the money markets), or utilising temporary cash resources within the Council.

Reducing the CFR – the Council's underlying borrowing need (CFR) is not allowed to rise indefinitely. Statutory controls are in place to ensure that capital assets are broadly charged to revenue over the life of the asset. The Council is required to make an annual revenue charge, called the Minimum Revenue Provision – MRP, to reduce the CFR. This is effectively a repayment of the borrowing need. This differs from the treasury management arrangements which ensure that cash is available to meet capital commitments. External debt can also be borrowed or repaid at any time, but this does not change the CFR.

The total CFR can also be reduced by:

- the application of additional capital financing resources, (such as unapplied capital receipts); or
- charging more than the statutory revenue charge (MRP) each year through a Voluntary Revenue Provision (VRP).

The Council's 2022/23 MRP Policy, (as required by DLUHC Guidance), was approved as part of the Treasury Management Strategy Report for 2022/23 on 22nd February 2022.

The Council's CFR for the year is shown below, and represents a key prudential indicator.

CFR (£000): General Fund	31.3.22 Actual	2022/23 Budget	31.3.23 Actual
Opening balance	11,051	9,490	9,489
Add unfinanced capital expenditure (as above)	(1,180)	8,836	5,871
Less MRP	(381)	(338)	(334)
Less ECTC Loan Repayment	0	(4,900)	(4,900)
Closing balance	9,490	13,088	10,127

Borrowing activity is constrained by prudential indicators for gross borrowing and the CFR, and by the authorised limit.

Gross borrowing and the CFR - in order to ensure that borrowing levels are prudent over the medium term and only for a capital purpose, the Council should ensure that its gross external borrowing does not, except in the short term, exceed the total of the capital financing requirement in the preceding year (2022/23) plus the estimates of any additional capital financing requirement for the current (2023/24) and next two financial years. This essentially means that the Council is not borrowing to support revenue expenditure. The table below highlights the Council's gross borrowing position against the CFR. The Council has complied with this prudential indicator.

£000	31.3.22 Actual	2022/23 Budget	31.3.23 Actual
Gross external borrowing position	£0	£0	£0
CFR	£9,490	£13,088	£10,127
Under funding of CFR	£9490	£13,088	£10,127

The authorised limit - the authorised limit is the “affordable borrowing limit” required by s3 of the Local Government Act 2003. Once this has been set, the Council does not have the power to borrow above this level. The table below demonstrates that during 2022/23 the Council has maintained gross borrowing within its authorised limit.

The operational boundary – the operational boundary is the expected borrowing position of the Council during the year. Periods where the actual position is either below or over the boundary are acceptable subject to the authorised limit not being breached.

Actual financing costs as a proportion of net revenue stream - this indicator identifies the trend in the cost of capital, (borrowing and other long term obligation costs net of investment income), against the net revenue stream.

£000	2022/23
Authorised limit	£10,000
Maximum gross external borrowing position during the year	£0
Operational boundary	£0
Average gross borrowing position	£0
Financing costs as a proportion of net revenue stream	The Council had no financing costs in 2022/23

3. Treasury Position as at 31st March 2023

The Council's treasury management debt and investment position is organised by the treasury management service in order to ensure adequate liquidity for revenue and capital activities, security for investments and to manage risks within all treasury management activities. Procedures and controls to achieve these objectives are well established both through Member reporting detailed in the summary, and through officer activity detailed in the Council's Treasury Management Practices.

At the end of 2022/23 the Council's treasury, position was as follows:

INVESTMENT PORTFOLIO	31.3.22 Actual £000	31.3.22 Actual %	31.3.23 Actual £000	31.3.23 Actual %
Treasury investments				
Banks – main bank account	2,530	7.5%	441	1.5%
Banks – call accounts	11,000	32.8%	22,000	73.5%
Money Market Funds	20,000	59.7%	7,500	25.0%
TOTAL TREASURY INVESTMENTS	33,530	100%	29,941	100%

Non-Treasury investments				
Third party loans - ECTC	4,900	100%	6,000	96.2%
Third party Loans – EC CLT	0	0%	235	3.8%
TOTAL NON-TREASURY INVESTMENTS	4,900	100%	6,235	100%

Treasury investments	33,530	87.2%	29,941	82.8%
Non-Treasury investments	4,900	12.8%	6,235	17.2%
TOTAL OF ALL INVESTMENTS	38,430	100%	36,176	100%

The maturity structure of the investment portfolio was as follows:

All Money Market investments and the amount held in the Council's main bank account with the NatWest are in cash and as such, can be recalled immediately.

The amounts held in call accounts can be called back at various points, with the last date being 16th August 2023.

The loan facility to East Cambridgeshire Trading Company runs until March 2026. However, the nature of the loan facility allows the Company to borrow and repay funding as their cashflow allows within the maximum facility of £7,500,000.

4. The Strategy for 2022/23

4.1 Investment strategy and control of interest rate risk

Investment Benchmarking Data – Sterling Overnight Index Averages (Term) 2022/23

FINANCIAL YEAR TO QUARTER ENDED 31/3/2023						
	Bank Rate	SONIA	1 mth	3 mth	6 mth	12 mth

Average	2.30	2.24	2.20	2.09	1.81	1.42	0.90
Spread	3.50	3.49	3.49	3.43	3.39	3.04	2.11

Investment returns picked up throughout the course of 2022/23 as central banks, including the Bank of England, realised that inflationary pressures were not transitory, and that tighter monetary policy was called for.

Starting in April at 0.75%, Bank Rate moved up in stepped increases of either 0.25% or 0.5%, reaching 4.25% by the end of the financial year, with the potential for a further one or two increases in 2023/24.

The sea-change in investment rates meant local authorities were faced with the challenge of proactive investment of surplus cash for the first time in over a decade, and this emphasised the need for a detailed working knowledge of cashflow projections so that the appropriate balance between maintaining cash for liquidity purposes, and “laddering” deposits on a rolling basis to lock in the increase in investment rates as duration was extended, became an on-going feature of the investment landscape.

With bond markets selling off, equity valuations struggling to make progress and, latterly, property funds enduring a wretched Q4 2022, the more traditional investment options, such as specified investments (simple to understand, and less than a year in duration) became more actively used.

Meantime, through the autumn, and then in March 2023, the Bank of England maintained various monetary policy easing measures as required to ensure specific markets, the banking system and the economy had appropriate levels of liquidity at times of stress.

Nonetheless, while the Council has taken a cautious approach to investing, it is also fully appreciative of changes to regulatory requirements for financial institutions in terms of additional capital and liquidity that came about in the aftermath of the Great Financial Crisis of 2008/09. These requirements have provided a far stronger basis for financial institutions, with annual stress tests by regulators evidencing how institutions are now far more able to cope with extreme stressed market and economic conditions.

4.2 Borrowing strategy and control of interest rate risk

During 2022/23, the Council maintained an under-borrowed position. This meant that the capital borrowing need, (the Capital Financing Requirement), was not funded with external loan debt as cash supporting the Council's reserves, balances and cash flow was used as an interim measure. This strategy was prudent as investment returns were initially low and minimising counterparty risk on placing investments also needed to be considered.

The policy of avoiding new borrowing by running down spare cash balances has served well over the past few years. However, this is kept under review to avoid incurring higher borrowing costs in the future when the Council may not be able to avoid new borrowing to finance capital expenditure.

Against this background and the risks within the economic forecast, caution was adopted with the treasury operations. The Director, Finance therefore monitored interest rates in financial markets and adopted a pragmatic strategy.

Interest rate forecasts were initially suggesting only gradual rises in short, medium and longer-term fixed borrowing rates during 2022/23 but by August it had become clear that inflation was moving up towards 40-year highs, and the Bank of England engaged in monetary policy tightening at every Monetary Policy Committee meeting during 2022, and into 2023, either by increasing Bank Rate by 0.25% or 0.5% each time. The CPI measure of inflation was still above 10% in the UK at the end of March 2023, but is expected to fall back towards 4% by the end of the calendar year. Nonetheless, there remain significant risks to that central forecast.

Forecasts at the time of approval of the treasury management strategy report for 2022/23 were as follows: -

Link Group Interest Rate View 20.12.21

PWLB RATES 2022/23

PWLB rates are based on gilt (UK Government bonds) yields through HM Treasury determining a specified margin to add to gilt yields. The main influences on gilt yields are Bank Rate, inflation expectations and movements in US treasury yields. Inflation targeting by the major central banks has been successful over the last 30 years in lowering inflation and the real equilibrium rate for central rates has fallen considerably due to the high level of borrowing by consumers: this means that central banks do not need to raise rates as much now to have a major impact on consumer spending, inflation, etc. This has pulled down the overall level of interest rates and bond yields in financial markets over the last 30 years. Indeed, in recent years many bond yields up to 10 years in the Eurozone turned negative on expectations that the EU would struggle to get growth rates and inflation up from low levels. In addition, there has, at times, been an inversion of bond yields in the US whereby 10-year yields have fallen below shorter-term yields. In the past, this has been a precursor of a recession.

However, since early 2022, yields have risen dramatically in all the major developed economies, first as economies opened post-Covid; then because of the inflationary impact of the war in Ukraine in respect of the supply side of many goods. In particular, rising cost pressures emanating from shortages of energy and some food categories have been central to inflation rising rapidly. Furthermore, at present the FOMC, ECB and Bank of England are all being challenged by persistent inflation that is exacerbated by very tight labour markets and high wage increases relative to what central banks believe to be sustainable.

5. Investment Outturn

Investment Policy – the Council’s investment policy is governed by DLUHC investment guidance, which has been implemented in the annual investment strategy approved by the Council on 22nd February 2022. This policy sets out the approach for choosing investment counterparties and is based on credit ratings provided by the three main credit rating agencies, supplemented by additional market data, (such as rating outlooks, credit default swaps, bank share prices etc.).

The investment activity during the year conformed to the approved strategy, and the Council had no liquidity difficulties.

Resources – the Council’s cash balances comprise revenue and capital resources and cashflow monies. The Council’s core cash resources comprised as follows:

Balance Sheet Resources (£000)	31.3.22	31.3.23
Earmarked reserves	16,908	14,964
Provisions	2,046	1,050
Usable capital receipts	1,434	1,481
CIL / Section 106	11,580	13,903
Council Tax Rebate Funding	4,616	0
Cash / Debtors	6,436	8,670
Internal Borrowing	(9,490)	(10,127)
Total	33,530	29,941

Investments held by the Council

- The Council maintained an average balance of £35,029 million of internally managed funds.
- The internally managed funds earned an average rate of return of 1.729%.
- The comparable performance indicator is the average 365-day backward looking uncompounded SONIA rate, which was 0.9159%.
- Total investment income was £605,546 compared to a budget of £38,644.

6. The Economy and Interest Rates

UK. Economy.

Against a backdrop of stubborn inflationary pressures, the easing of Covid restrictions in most developed economies, the Russian invasion of Ukraine, and a range of different UK Government policies, it is no surprise that UK interest rates have been volatile right across the curve, from Bank Rate through to 50-year gilt yields, for all of 2022/23.

Market commentators’ misplaced optimism around inflation has been the root cause of the rout in the bond markets with, for example, UK, EZ and US 10-year yields all rising by over 200bps in 2022. The table below provides a snapshot of the conundrum facing central banks: inflation is elevated but labour markets are extra-ordinarily tight, making it an issue of fine judgment as to how far monetary policy needs to tighten.

	UK	Eurozone	US
Bank Rate	4.25%	3%	4.75%-5%
GDP	0.1%q/q Q4 (4.1%y/y)	+0.1%q/q Q4 (1.9%y/y)	2.6% Q4 Annualised
Inflation	10.4%y/y (Feb)	6.9%y/y (Mar)	6.0%y/y (Feb)
Unemployment Rate	3.7% (Jan)	6.6% (Feb)	3.6% (Feb)

Q2 of 2022 saw UK GDP deliver growth of +0.1% q/q, but this was quickly reversed in the third quarter, albeit some of the fall in GDP can be placed at the foot of the extra Bank Holiday in the wake of the Queen's passing. Q4 GDP was positive at 0.1% q/q. Most recently, January saw a 0.3% m/m increase in GDP as the number of strikes reduced compared to December. In addition, the resilience in activity at the end of 2022 was, in part, due to a 1.3% q/q rise in real household disposable incomes. A big part of that reflected the £5.7bn payments received by households from the government under the Energy Bills Support Scheme.

Nevertheless, CPI inflation picked up to what should be a peak reading of 11.1% in October, although hopes for significant falls from this level will very much rest on the movements in the gas and electricity markets, as well as the supply-side factors impacting food prices. On balance, most commentators expect the CPI measure of inflation to drop back towards 4% by the end of 2023. As of February 2023, CPI was 10.4%.

The UK unemployment rate fell through 2022 to a 48-year low of 3.6%, and this despite a net migration increase of c500k. The fact remains, however, that with many economic participants registered as long-term sick, the UK labour force shrunk by c500k in the year to June. Without an increase in the labour force participation rate, it is hard to see how the UK economy will be able to grow its way to prosperity, and with average wage increases running at over 6% the MPC will be concerned that wage inflation will prove just as sticky as major supply-side shocks to food (up 18.3% y/y in February 2023) and energy that have endured since Russia's invasion of Ukraine on 22 February 2022.

Bank Rate increased steadily throughout 2022/23, starting at 0.75% and finishing at 4.25%.

In the interim, following a Conservative Party leadership contest, Liz Truss became Prime Minister for a tumultuous seven weeks that ran through September and October. Put simply, the markets did not like the unfunded tax-cutting and heavy spending policies put forward by her Chancellor, Kwasi Kwarteng, and their reign lasted barely seven weeks before being replaced by Prime Minister Rishi Sunak and Chancellor Jeremy Hunt. Their Autumn Statement of the 17th of November gave rise to a net £55bn fiscal tightening, although much of the "heavy lifting" has been left for the next Parliament to deliver. However, the markets liked what they heard, and UK gilt yields have reversed the increases seen under the previous tenants of No10/11 Downing Street, although they remain elevated in line with developed economies generally.

As noted above, GDP has been tepid throughout 2022/23, although the most recent composite Purchasing Manager Indices for the UK, US, EZ and China have all surprised to the upside, registering survey scores just above 50 (below suggests economies are contracting, and above suggests expansion). Whether that means a shallow recession, or worse, will be avoided is still unclear. Ultimately, the MPC will want to see material evidence of a reduction

in inflationary pressures and a loosening in labour markets. Realistically, that is an unlikely outcome without unemployment rising and wage settlements falling from their current levels. At present, the bigger rise in employment kept the ILO unemployment rate unchanged at 3.7% in January. Also, while the number of job vacancies fell for the ninth consecutive month in February, they remained around 40% above pre-pandemic levels.

Our economic analysts, Capital Economics, expect real GDP to contract by around 0.2% q/q in Q1 and forecast a recession this year involving a 1.0% peak-to-trough fall in real GDP.

The £ has remained resilient of late, recovering from a record low of \$1.035, on the Monday following the Truss government's "fiscal event", to \$1.23. Notwithstanding the £'s better run of late, 2023 is likely to see a housing correction of some magnitude as fixed-rate mortgages have moved above 4.5% and affordability has been squeezed despite proposed Stamp Duty cuts remaining in place.

As for equity markets, the FTSE 100 started 2023 strongly, rising to a record high of 8,014 on 20th February, as resilient data and falling inflation boosted earnings. But global equities fell sharply after concerns over the health of the global banking system emerged early in March. The fall in the FTSE 100 was bigger than the drop in the US S&P 500. Indeed, at around 7,600 now, the FTSE is 5.2% below its record high on 20th February, while the S&P 500 is only 1.9% lower over the same period. That's despite UK banks having been less exposed and equity prices in the UK's financial sector not falling as far. It may be due to the smaller decline in UK interest rate expectations and bond yields, which raise the discounted value of future earnings, compared to the US.

USA. The flurry of comments from Fed officials over recent months suggest there is still an underlying hawkish theme to their outlook for interest rates. Markets are pricing in a further interest rate increases of 25-50bps, on top of the current interest rate range of 4.75% - 5%.

In addition, the Fed is expected to continue to run down its balance sheet once the on-going concerns about some elements of niche banking provision are in the rear-view mirror.

As for inflation, it is currently at c6% but with the economy expected to weaken during 2023, and wage data already falling back, there is the prospect that should the economy slide into a recession of any kind there will be scope for rates to be cut at the backend of 2023 or shortly after.

EU. Although the Euro-zone inflation rate has fallen below 7%, the ECB will still be mindful that it has further work to do to dampen inflation expectations and it seems destined to raise rates to 4% in order to do so. Like the UK, growth has remained more robust than anticipated but a recession in 2023 is still seen as likely by most commentators.
